1. 打开Tomcat\_HOME/conf/logging.properties文件

2. 将所有的UTF-8编码改为GBK编码

```
28 1catalina.org.apache.juli.AsyncFileHandler.maxDays = 90
29 1catalina.org.apache.juli.AsyncFileHandler.encoding = GBK
90 中文版Windows的控制台的默认文字编码是GBK
91 2localhost.org.apache.juli.AsyncFileHandler.level = FINE
32 2localhost.org.apache.juli.AsyncFileHandler.directory = ${catalina.base}/logs
33 2localhost.org.apache.juli.AsyncFileHandler.prefix = localhost.
34 2localhost.org.apache.juli.AsyncFileHandler.maxDays = 90
35 2localhost.org.apache.juli.AsyncFileHandler.encoding = GBK
   将 "UTF-8" 编码改为 "GBK" 编码 (共5处地方)
3manager.org.apache.juli.AsyncFileHandler.level = FINE
   3manager.org.apache.juli.AsyncFileHandler.directory = ${catalina.base}/logs
   3manager.org.apache.juli.AsyncFileHandler.prefix = manager.
   3manager.org.apache.juli.AsyncFileHandler.maxDays = 90
   3manager.org.apache.juli.AsyncFileHandler.encoding = GBK
   4host-manager.org.apache.juli.AsyncFileHandler.level = FINE
   4host-manager.org.apache.juli.AsyncFileHandler.directory = ${catalina.base}/logs
   4host-manager.org.apache.juli.AsyncFileHandler.prefix = host-manager.
   4host-manager.org.apache.juli.AsyncFileHandler.maxDays = 90
   4host-manager.org.apache.juli.AsyncFileHandler.encoding = GBK
   java.util.logging.ConsoleHandler.level = FINE
   java.util.logging.ConsoleHandler.formatter = org.apache.juli.OneLineFormatter
   java.util.logging.ConsoleHandler.encoding = GBK
```
